

WHAT IS CLAIMED IS:

1. A supplemental shelf for vehicle-mounted cleaning systems, comprising
at least one perimeter member;
at least one front mounting member configured to at least partially secure said supplemental shelf with respect to a water management system in a first direction; and
at least one rear mounting member configured to cooperate with said front mounting member to at least partially secure said supplemental shelf in a second direction orthogonal to said first direction.
2. The supplemental shelf of claim 1, further comprising:
a plurality of perimeter members; and
a plurality of lateral support members coupling said perimeter members.
3. The supplemental shelf of claim 2, wherein said plurality of perimeter members and said plurality of lateral support members form an enclosure, said enclosure being configured to securely restrain a plurality of cleaning solution containers.
4. The supplemental shelf of claim 1, further comprising a plurality of front mounting members separated by a distance greater than a length of a component of a water management system to which said front mounting members are to be coupled.
5. The supplemental shelf of claim 1, further comprising a friction sleeve coupled to at least one of said front mounting members.
6. The supplemental shelf of claim 1, further comprising a friction sleeve coupled to at least one of said rear mounting members.

7. The supplemental shelf of claim 1, further comprising:
a plurality of rear mounting members disposed along a rear mounting line; and
a plurality of front mounting members disposed along a front mounting line;
wherein said rear mounting line and said front mounting line are separated by a distance less than a width of a component of a water management system to which said front mounting members and said rear mounting members are to be coupled.
8. The supplemental shelf of claim 1, wherein said perimeter member, said front mounting member, and said rear mounting member are made of steel.
9. The supplemental shelf of claim 1, wherein said perimeter member, said front mounting member, and said rear mounting member are made of one of a metal, a plastic, or a composite.
10. The supplemental shelf of claim 1, wherein said supplemental shelf is configured to securely restrain more than 4 cleaning solution containers.
11. A supplemental shelf for a vehicle mounted cleaning system, comprising:
a plurality of spaced apart perimeter members configured to contain a plurality of containers;
a plurality of lateral members coupling said spaced apart perimeter members;
a plurality of spaced apart front mounting members coupled to a front portion of at least one of said perimeter members; and
a plurality of spaced apart rear mounting members coupled to a rear portion of at least one of said perimeter members and being spaced apart from said front mounting members.
12. The supplemental shelf of claim 11, wherein said perimeter members include two perimeter members.

13. The supplemental shelf of claim 11, wherein said front mounting members and said rear mounting members each include two members.

14. The supplemental shelf of claim 11, wherein said perimeter members, said front mounting members, and said rear mounting members are made of steel.

15. The supplemental shelf of claim 11, wherein said perimeter members, said front mounting members, and said rear mounting members are made of plastic.

16. The supplemental shelf of claim 11, wherein said supplemental shelf is configured to securely restrain more than 4 cleaning solution containers.

17. A supplemental shelf for vehicle-mounted cleaning systems, comprising:
at least one perimeter member configured to securely restrain a plurality of cleaning solution containers;
at least one front mounting member configured to at least partially secured said supplemental shelf to a horizontal member of a water management system in a first direction;
and
at least one rear mounting member configured to secure said supplemental shelf to said horizontal member of a water management system in a second direction orthogonal to said first direction;
wherein a distance between said front mounting member and said rear mounting member in said first direction is less than a width of said horizontal member of said water management system.

18. The supplemental shelf for vehicle-mounted cleaning systems of claim 17, further comprising:
a plurality of perimeter members; and
a plurality of lateral support members coupling said perimeter members.

19. The supplemental shelf for vehicle-mounted cleaning systems of claim 17, further comprising a friction sleeve coupled to at least one of said front mounting members and at least one of said rear mounting members.

20. The supplemental shelf of claim 17, further comprising:
a plurality of rear mounting members disposed along a rear mounting line; and
a plurality of front mounting members disposed along a front mounting line;
wherein said rear mounting line and said front mounting line are separated by a distance less than a width of a component of a water management system to which said front mounting members and said rear mounting members are to be coupled.

21. The supplemental shelf of claim 17, wherein said perimeter member, said front mounting member, and said rear mounting member are made of one of steel, plastic, or composite.
